RXNT

Specialty Patient Enrollment Overview

What it is

Specialty Patient Enrollment allows you to automate the patient enrollment process for specialty medications.

Embedding directly into your EHR, it alerts staff when specialty patient enrollments are needed, automatically completes and sends enrollment forms and provides a flexible, simple channel for sharing information with specialty pharmacies and hubs.

How it works

Specialty Patient Enrollment helps your practice automate specialty enrollment forms.

1

As you enter a new prescription, your EHR determines whether a specialty patient enrollment form is needed. Using information gathered from your patient's EHR data, Specialty Patient Enrollment automatically completes the form.

2

Your EHR automatically delivers the form to the specialty pharmacy in the pharmacy's preferred format. Your staff can easily send additional information to the specialty pharmacy as needed.

3

Your patient gets their prescription without experiencing difficult obstacles or potentially dangerous delays.

What it looks like in action

Key advantages

- Replaces paperwork, faxes and phone calls, offering a dramatically more efficient way to complete specialty enrollment forms

- Keeps the entire specialty patient enrollment process within your EHR workflow

- Brings consistency to your workflow, standardizing the specialty patient enrollment process across most drugs and pharmacies

- Offers a faster, more convenient way to communicate patient enrollment information to specialty pharmacies and hubs

- Reduces unnecessary entry of data already in the EHR and helps mitigate risk of keying in incorrect information

- Has emerging capabilities that allow your EHR to automatically initiate and deliver forms without the need for hands-on attention from your administrative staff

You're treating Sara for arthritis. You decide the best medication is HUMIRA®.

In your EHR, you enter Sara's Humira prescription and select a specialty pharmacy. Your EHR determines a specialty patient enrollment form is needed. Specialty Patient Enrollment automatically completes the enrollment form using information gathered from Sara's EHR data.

Automated, pre-populated specialty enrollment forms

Your EHR delivers Sara's patient enrollment form to her specialty pharmacy in the pharmacy's preferred format — without the need for action from your staff. In this case, the pharmacy prefers faxes, so the form is sent electronically and arrives as a fax.

Intelligent, automatic communication with specialty pharmacies

If a specialty hub is involved, your EHR will prompt your staff to ask for Sara's consent before automatically transmitting her enrollment information to the hub.

Electronic, automated delivery to specialty hubs

With enrollment forms in hand, the specialty pharmacy and hub are able to move immediately. The pharmacy processes the enrollment and is able to fill Sara's prescription.

Quick, efficient dispensing for specialty pharmacies

Sara gets her Humira prescription from her specialty pharmacy without experiencing difficult obstacles. She starts her treatment within days, avoiding potentially dangerous delays.

Positive patient experiences — and a faster, safer path to treatment
